2000

A Generalization of Pascal's Theorem.

By Sir WILLIAM R. HAMILTON.

Communicated March 16, 1851.

[*Proceedings of the Royal Irish Academy*, vol. 5 (1853), p. 100–101.]

Sir William R. Hamilton communicated to the Academy a generalization of Pascal's theorem, to which he had been led by the method of quaternions.

Equation of Homodeuterism:

$$\Sigma(\pm ABCDEF \cdot GHIK) = 0$$

$ABCDEF$ = aconic function of a hexagon;

$GHIK$ = volume of a pyramid.

Sir Wm. R. Hamilton proposes to give a more full explanation of the nature of this equation of *homodeuterism*, and of what he calls the aconic function of a hexagon, at a future meeting of the Academy. The equation itself was exhibited by him to some scientific friends so long ago as the August and September of 1849; and also at the Meeting of the British Association, at Edinburgh, in 1850.
