

## General Mathematics

### Fifteen years of publication

The "General Mathematics" review is edited by the Department of Mathematics of "Lucian Blaga" University of Sibiu. The conclusion that editing a mathematic review was necessary, was reached in 1993, after several discussions among the Department staff, and this review was meant to publish the results following the research work of the Department members, of other Romanian mathematics, and also of the foreign mathematicians.

From the beginning it was issued to contain articles of high scientific value, from all mathematical fields - fundamental or applied - thus emphasizing the permanent progress of the "Queen of Sciences" as great Gauss wonderfully named Mathematics.

The name of the review has been suggested by our colleague Professor dr. Silviu Crăciunaş, who became the first Editor Manager and the soul of the apparition of the first volumes of General Mathematics. In present, he takes care of the electronical version of our review. I have been Managing Editor since 1999.

The first volume, concerning a single issue appeared at the end of 1993. The review was later on published in four issues per year. After 1997, there were some delays in its publishing, due to certain objective reasons, but at the end of 2003 we managed to arrive up to date.

During its 15 years of apparition the Editorial board has been enriched with the participation of several well - known personalities of the nowadays Mathematics. We thank them and our contributions for their trust and support.

Also the review's format has changed during these 15 years. Initially, the cover included a picture of the old town Sibiu; now it doesn't contain it any more, but its a form is more discreet and includes the University heading and the one Department of Mathematics. The content of the review has enriched year after year through the contribution of some illustrious names of the world Mathematics, with original articles.

All issues of General Mathematics can be found at Department of Mathematics' Library. We are pleased that by the exchange with other Romanian or foreign reviews and by its internet editing , our review is contributing to the interhuman exchange of information regarding Mathematics.

I think that to contribute to the Mathematics development means to support prosperity of the world.

All those who love mathematics and have original results in its fields are welcomed to become contributors to our young review.

To our joy our review was included in the site [www.emis.de](http://www.emis.de), starting with July 2007.

Managing Editor,  
Lecturer Ph.D. Amelia Bucur
